Xinyi Jiang

8613595565020 | XJDYX_2021@163.com

EDUCATIONAL BACKGROUND

University of Wisconsin-Madison Madison, WI

MS in Economics Sept. 2025-Jun. 2027

Courses: Macroeconomics, Microeconomics, Econometrics (I II), Data Analytics for Economists, Machine Learning

Xiamen University Malaysia Selangor Darul Ehsan, Malaysia

Bachelor of Management in International Business (Honor program) Sept. 2021-Jul. 2025

Courses: Macroeconomics, Microeconomics, International Economics, Statistics of Business, Quantitative Method and Data Analysis, Accounting, Finance, International Finance, International Business Law

RESEARCH & PROJECT EXPERIENCES

Discipline-Aware Adaptation in Language Models: When Should a User's Field Change the Answer

Group Project Aug. 2026-present

- Led the design of controlled experiments by constructing a test set of 60 ambiguous words across four disciplines (Computer Science, Medicine, Educational Psychology, and Statistics) and 420 ExpertQA control questions, and generated over 3,120 response sets across GPT-5.6, Olmo 3 7B, and Olmo 3.1 32B models to measure the causal effect of disciplinary cues on model sense selection
- Developed a verifiable automated evaluation pipeline by designing an "LLM review + human verification" scheme, helped code 200 stratified samples with a third-party arbiter to report Cohen's κ reliability, supplemented by forced-choice probes and sentence embedding similarity as quantitative diagnostic metrics
- Conducted empirical statistical analysis using paired t-tests to estimate treatment effects and cluster bootstrap methods to construct 95% confidence intervals, performing statistical inference on multiple outcome variables such as accuracy, explanation depth, and terminology usage
- Contributed to the full-cycle academic writing and iteration process by taking charge of data processing, scoring rubrics, and statistical analysis modules, while collaborating on literature reviews and experimental design to refine the study's internal validity and scope through multiple rounds of peer-review-style revisions

Spring Research at UWM Jan. 2026-May. 2026

Advisor: Harold Chiang

- Systematically traced and screened empirical studies citing this work based on Roger Koenker (2004), and established a structured dataset containing research design, sample structure, variable specification, and model details to provide data support for subsequent heterogeneity effect analysis
- Used Python to call academic database APIs such as OpenAlex, designed a data processing pipeline to perform citation retrieval, keyword filtering, and preliminary metadata extraction, and managed to improve the efficiency and accuracy of large-scale literature screening
- Conducted an in-depth study on econometrics and machine learning literature, successfully reproduced the core algorithms and empirical results of papers related to semi-supervised learning, and validated the effectiveness of the models under specific data structures
- Manually checked the data sections of the original papers on empirical applications of panel data and quantile regression to ensure the accuracy of variable and sample information, achieving an efficient research closed loop of "automated program screening + in-depth manual verification"

Spring Research at UWM Feb. 2026-May. 2026

Advisor: Jerry Zhu

- Independently proposed a research proposal for large language models to directly execute no-regret update rules during inference in order to approximate game equilibria, and initiated preliminary collaboration discussions with Professor Jerry Zhu
- Conducted an in-depth study of GTBench and Fish et al.'s empirical literature on algorithmic collusion, critically analyzed the performance limitations of large language models across ten types of game scenarios, and comparatively evaluated the methodological differences between diagnostic benchmarks and causal identification methods

Socioeconomic Determinants of Marital Status in China Apr. 2024-Aug. 2024

Graduation Project

- Built the multiple linear regression model based on the marriage data in China from 2010 to 2020
- Employed PCA model to make data analyses of low marriage rate and high divorce rate in China
- It revealed that an increase in both the ratio of disposable income of the marriageable population to GDP per capita and the sex ratio of the marriageable population in China would help reduce the marriage rate

Research Assistant of Xiamen University Malaysia Apr. 2024-Jul. 2024

- Assisted in sorting out current research hotspots and classic literature, and writing the literature review
- Helped collect and analyze data, completed data cleansing work, and participated in designing and analyzing empirical models

Analyzing the Influence of Personal Income and Sex Ratio on Marital Status

Independent Research Jul. 2023-Sept. 2023

- The paper has been accepted by 2023 5th International Conference on Global Economy, Finance and Humanities Research (GEFHR 2023)
- Established a multiple linear regression model based on the data of China from 2000 to 2021 and establishes an ARIMA model to analyze and forecast the data
- It revealed that an increase in the percentage of women in the undergraduate population and an increase in the sex ratio of the 20-25-year-old population reduced the marriage rate

Introduction to Causal Inference in Econometrics

Team member, Advisor: Edward Jun. 2023-Aug. 2023

- Took charge of data collection and data analysis work, independently wrote codes and data analysis reports and completed PPT materials
- Used the linear regression analysis to identify a consistent negative relationship between economic growth and NPEE enrollment

The Dynamics of Governance in a Volatile, Uncertain, Complex and Ambiguous World Nov. 2022

Independent Research, Advisor: Tee Chee Lip

- Analyzed the cause of poverty in developing countries based on evidence from Tanzania, Pakistan and Sri Lanka
- It revealed that poor countries had higher corruption indexes and high fertility rates were common problems confronting extremely poor countries

INTERNSHIP EXPERIENCES

Shenzhen Research Institute, Renmin University of China Shenzhen, China

Research Assistant Intern Feb. 2025-June. 2025

- Co-authored "Pathways for Technology Finance to Empower Innovation-Driven Development: A Case Study of Shenzhen", received the Excellence Award from the Shenzhen Special Economic Zone Finance Society
- Wrote multiple articles on economic and financial topics for Renmin University's official account (publicly available)

Shenzhen Institute of Data Economy Shenzhen, China

Research Assistant Intern Oct. 2024-Jan. 2025

- Helped write research reports, and participated in writing consulting reports for a listed company
- Assisted with data collection and data analysis, and conducted a thorough study on different industries and markets
- Participated in the methodological research

Heliocentrism Private Fund Management (Zhuhai Hengqin) Co., Ltd. Zhuhai, China

Research Assistant Jan. 2024-Apr. 2024

- Mined accurate, timely and relevant financial data and market information from different sources, including macroeconomic data, corporate financial statements, industry reports, market news, etc.
- Conducted an in-depth analysis of the data using statistical software and financial tools, evaluated investment opportunities and risks to provide quantitative support for investment strategies

Zhongshan Securities Shenzhen, China

Summer Intern, Research Institute Jul. 2023-Aug. 2023

- Followed up the macroeconomics, monetary and market condition changes, sorted out the logic and framework of macro research, maintained the database of macroeconomic indicators, supplemented and improved the investment and research system of interest rates and derivatives, and wrote relevant investment and research reports
- Helped research the relationship between the macroeconomy and financial market, participated in analyzing and discussing investment strategies, and assisted the investment management in making effective interest rate and derivatives investment trading strategies
- Undertook the daily transaction processes and data summary, kept track of position market transactions and completed relevant daily reports and special reports

ADDITIONAL INFORMATION

- **Programming skills**: Python, R, SQL
- **Language skills**: English (fluent), Mandarin (native), Malay (basic)
